AI AND ML BASED REPORTING &
PREDICTIVE ANALYSIS

Our platform is built from the ground up using our patented cloud automation and code generation methods to enable the agile, data-ops-oriented approach that underlies our solutions. Our Solutions is pioneering a cloud-native approach to building, deploying, and managing powerful IT analytics.

Our IT analytics platform delivers a range of end-user data visualization and analytical techniques that are powerful and easy to use. The IT dashboards can embed a range of visualizations to present insights that are clear and compelling. Our intuitive drag-and-drop interface makes it quick and easy to explore data using out-of-the-box grids, graphs, charts, and maps. Our solutions contains several pre-built IT dashboards that provide role-specific, actionable insights.

DOCUMENT MANAGEMENT SYSTEM

Document management controls the life cycle of documents in your organization — how they are created, reviewed, and published, and how they are ultimately disposed of or retained. Although the term "management" implies that information is controlled from the top of the organization, an effective document management system should reflect the culture of the organization that uses it. The tools that you use for document management should be flexible enough to enable you to tightly control a document's life cycle, if that fits your enterprise's culture and goals, but also to let you implement a more loosely structured system, if that better suits your enterprise.

KEY FEATURES

- Central repository for documents

- Multiple sources of document input (fax, email, scan or upload)

- Efficient document organization with the use of metadata, tags and categories

- Data protection, thanks to an extended permission management system

- Business role system for better protection of key data

- Access to data and documents from mobile devices

DOCUMENT MANAGEMENT SYSTEM FEATURES

ADMINISTRATORS USERS MANAGEMENT

The administrator user section shows the list of admin users accessing the panel. The admin can search and sort the list. The admin can even edit and delete the existing record.

- *View Admin*
